

Forensic Resolution Dossier

Evidence Pack v1.0 — Sample

DISCLOSURES

1. This artifact demonstrates structural compliance with IAVP v1.0. Redacted fields do not affect verification semantics.
2. This public sample is labeled DEMO_SIMULATED and does not represent production-retained WORM data.
3. Demonstration keys are segregated from production keys.

1. Document Control

Document ID	IA-FRD-1.0
Version	1.0
Publication Date (UTC)	2026-02-19T00:00:00.000000Z
Protocol Reference	IAVP v1.0 (/protocol/iavp/v1)
Engine Version	3.0.0
config_hash_sha256	f636bc02c0eb2a7b3f34e4837a42507f70e400ec6e5bc0fc0b1c1f5a270feef0
batch_id	[REDACTED]
record_count	100
artifact_mode	DEMO_SIMULATED
attested_scope	FULL_BATCH_MANIFEST

2. Batch Attestation Summary

total_records	100
l1_pct	65.0%
l2_pct	20.0%
l3_pct	10.0%
l4_pct	5.0%
replay_runs	3
replay_variance	0
replay_method	FULL_BATCH_REPROCESS_UNDER_IDENTICAL_CONFIG
hash_chain.method	SHA256_CHAIN_V1
hash_chain.ordering	STABLE_INPUT_ORDER_V1

3. Hash Chain Root

root_hash_sha256	7d132152fdbfad91f48491f0b20808ff27158c26ef5a12cd00db8a65ee34ef44
record_count	100

Genesis: H[0] = 32 zero bytes (64 hex zeros).

The root hash is computed by iteratively hashing each record in STABLE_INPUT_ORDER_V1 sequence. Each step concatenates the previous hash with the current record hash before applying SHA-256.

4. Signature Block

Signature Algorithm	ECDSA P-256
Signature Encoding	DER
Signature Timestamp (UTC)	2026-02-19T00:00:00.000000Z
pubkey_fingerprint_sha256	8bf795f66fc7542681e2e94c710cfbb64ce1f614b1719f5da17bd024d1e7e464

Verification Command:

```
openssl dgst -sha256 -verify public_key.pem \  
-signature attestation_signature.der \  
attestation_manifest.jcs.json
```

Fingerprint Verification (Optional):

```
openssl pkey -pubin -in public_key.pem -outform DER | openssl dgst -sha256
```

5. Replay Confirmation

Reprocessing under identical configuration produced identical outcomes. Replay variance: **0**.

6. Verification Instructions

1. Download the verification bundle: iavp_v1_example_bundle.zip
2. Extract the bundle to a local directory.
3. Run the verification command:

```
openssl dgst -sha256 -verify public_key.pem \  
-signature attestation_signature.der \  
attestation_manifest.jcs.json
```

4. Expected output: Verified OK
